

Birth-death RDME ($D=1.0$, $\lambda=0.5$, $\mu=0.5$, $\bar{n}=1.0$) — flux-adaptive coarsening: 16 voxels $\rightarrow$ 8 super-voxels

■ A_k — per-voxel reactions (diagonal)
 ■ $D_{kk'}$ — diffusion coupling (off-diagonal) fine: 24 $\rightarrow$ coarse: 11 edges
 Zero (no coupling)
