

1. Mean-field ODE
($E[n \cdot (n-1)] \approx E[n]^2$: wrong for bistable)

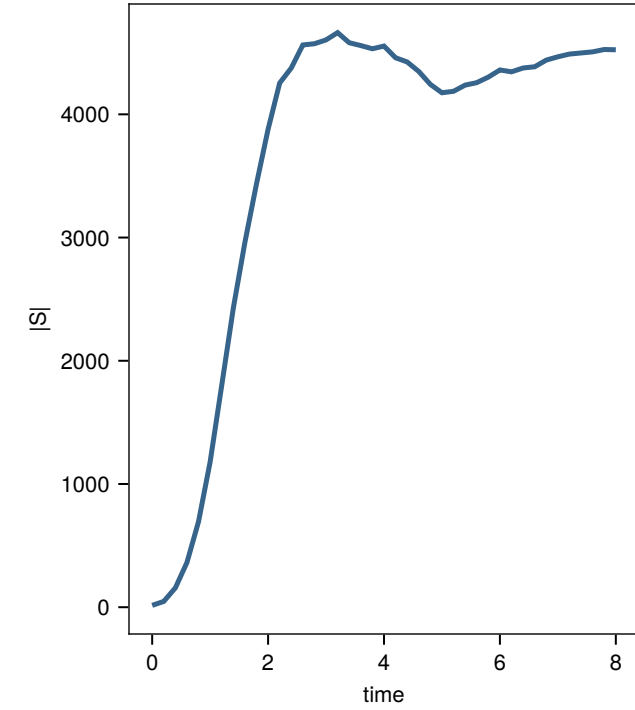

2. Per-voxel FSP + mean-field coupling
(front mean $\approx n_{\text{uns}}$ → injects unstable point into neighbours)

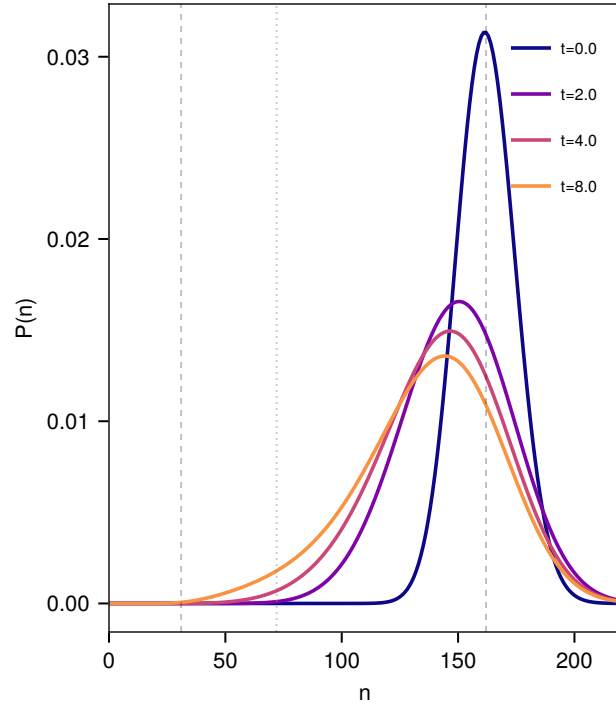

3. Multigrid FSP (V-cycle)
(joint $P(n_1, n_2)$: correct front diffusion)

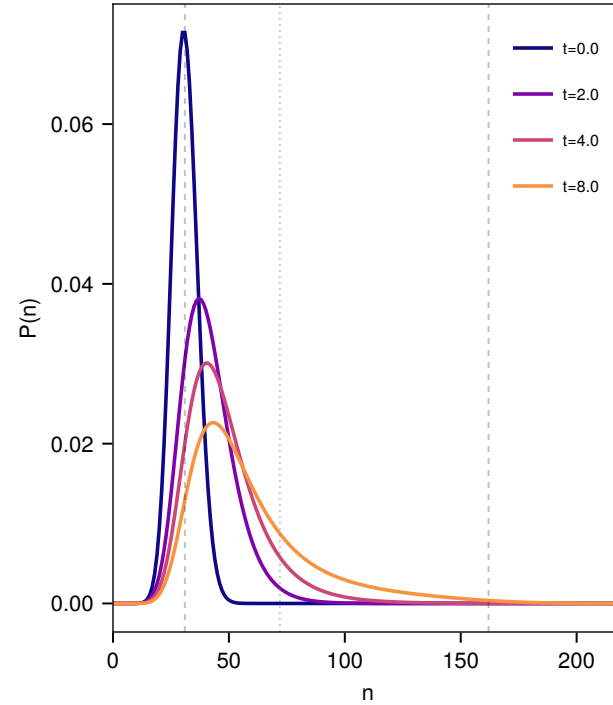

Multigrid FSP state space
($D=0.05$, prune=0.0001, expand=0, cr=1)

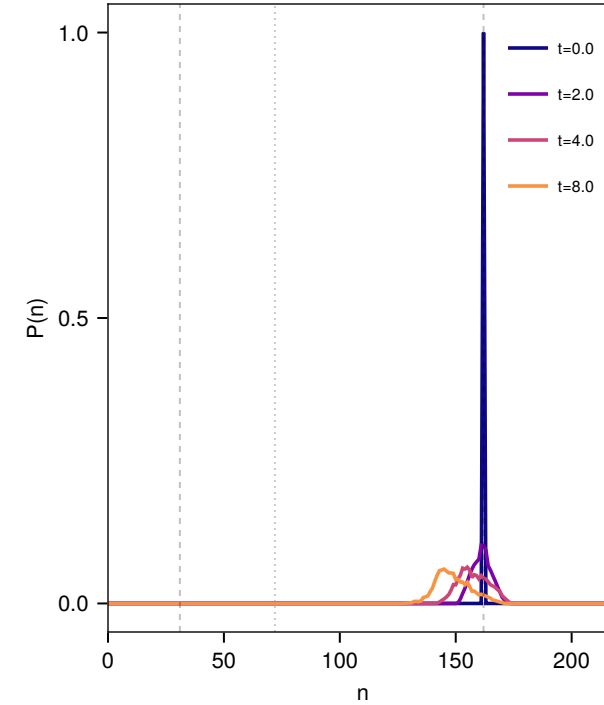

Per-voxel FSP: $P(n)$ at voxel 2 (hi→?)

Per-voxel FSP: $P(n)$ at voxel 3 (lo→?)

Multigrid FSP: $P(n)$ at voxel 2 (hi→?)

Multigrid FSP: $P(n)$ at voxel 3 (lo→?)
